## DRYING IRONERS

- THE CONTROL SYSTEM
- THE GAS BURNER
- DAMP EXHAUST
- FINGERGUARD

**IMESA DRYING IRONERS** are projected with a strong frame **based on design research.**

Elegance and strength are mixed up together in a machine following the most up-dated technological trends.

**IMESA** had a careful eye about safety: **every ironer is equipped with two emergency switches.**

**All parts subject to heating and warm temperature are protected and are located out of hands reach:** the new design provides panels shaped for full coverage.

**IMESA drying ironers** allow to press & dry linen at the same time after washing in a **IMESA** high-spin washer.

Our drying ironers are the best solution for the modern laundry whereas the installation of extractor and dryer may be avoided and the whole process may be carried out by high-spin washer and drying ironer.

Room and financial savings are very evident if thinking about **purchase of more equipment and its fittings, energy consumption and so on.**

### CONTROL SYSTEM

The control panel has following functions:

- On/off and cool down at work end before complete turning off
- Electronic regulation of temperature either in Celsius or Fahrenheit degrees
- Electronic regulation of roller speed either in metres or ft. per minute
- Cool down
- Suction fan
- Options: special software for coin operation (either for different currencies, different prices or central payment units)

Linen laid on introduction belts is taken around the warm drum by Nomex pressing bands; **operators may vary temperature & pressing speed** according to linen wetness and type of textile.

**IMESA drying ironers** are available with electric or gas heating; they are equipped with two **powerful aspirating fans** for the best damp evacuation. Models with front feeding and exit are our room saving hits.

Full-length fingerguard bar positioned and full isolated roller cover

The **GAS BURNER** jet line is extended to drum full length to guarantee heating spread-out; it also carries all CE safety devices. Damp and gases are exhausted on the opposite side where motors and gas valve are located; the exhaust ensured by two powerful motor-fans must be connected to an outside chimney.

Two take-down trays for linen at feeling and exit

Damp exhaust

### CERTIFIED QUALITY

**IMESA** machines are of good quality and of extremely reliable. Our plants are certified and work in according to the quality system standard UNI EN ISO 9001/2000. An investment in our machines in an high economic solution.

### FINGERGUARD:

It is one of the most important operator's protection. Fingerguard bar protects operator's hands also acting as stop-switch for too thick linen.
